SUBJECT No. 97.

Abolition of irrigation cess on excess in minor inams.

Mr. Malali Venkataramaiya, Manjarabad Taluk.

Summary of discussion.—Excess in minor inams, the survey valuation of which exceeds Rs. 5, is divided and treated as Government land, while that less than Rs. 5 in value is confirmed as inam, the assessment thereon being levied as additional quit-rent on the whole inam. Irrigation cess, being merged in the survey assessment, has to be levied only on the inam *beriz*, and not on the inam *beriz* and excess in inam, as is being done. The irrigation cess on the excess inam should be remitted.

Reply of Government.—According to the existing practice, the difference is added to the quit-rent and treated as kasar jodi, and as the quit-rent once settled is final, the irrigation cess is not liable to further revision unlike irrigation cess levied on Government lands. There are, therefore, distinct advantages in the arrangement and no change is called for.

SUBJECT No. 98.

Acquisition of lands for building sites.

Mr. Srinivas Sitaram Kulkarni, Harihar Sub-Taluk.

Summary of discussion.—Deputy Commissioners may be invested with powers to acquire lands required for the extension of village sites on payment of compensation to the owners concerned without reference to higher authorities.

Reply of Government.—Lands are acquired with all expedition and it is not necessary to invest Deputy Commissioners with any such powers.

SUBJECT No. 99.

Raiyats to be permitted to repair drains situated outside their lands.

Mr. Kigga Channakesava Rao, Koppa Taluk.

Summary of discussion.—Raiyats may be permitted to repair drains situated at a little distance from their lands, which were dug by their ancestors. At present such cases are brought on the takrar takhta and the raiyats fined.

Reply of Government.—Orders will be issued granting permission to repair existing drains.

SUBJECT No. 100.

Wet cultivation under Marikanave tank.

Mr. Amble Annaiya Pandit, Yedatore Taluk.

Summary of discussion.—It is prayed that a special officer may be appointed to encourage wet cultivation below the Marikanave tank.

Reply of Government.—The bulk of the land under the Marikanave tank has already been taken up. Much of the uncultivated land is already in the holding of private persons. Special facilities have been provided for the cultivation of such lands by permitting the use of water at favourable rates for raising dry and other crops for which the lands may be suitable and every encouragement is given to cultivators to come and settle in the tract.

SUBJECT No. 101.

Entry of certain particulars in survey maps.

Mr. H. Rama Rao, Tumkur Taluk.

Summary of discussion.—It is prayed that the main channels, hallas, branch channels, foot-paths, etc., may be shown in maps and tippanis to be prepared hereafter, as great inconvenience is felt when disputes arise as to their existence.
